OSA Platform Structure — Website, Dashboard, Coach App & Client Portal

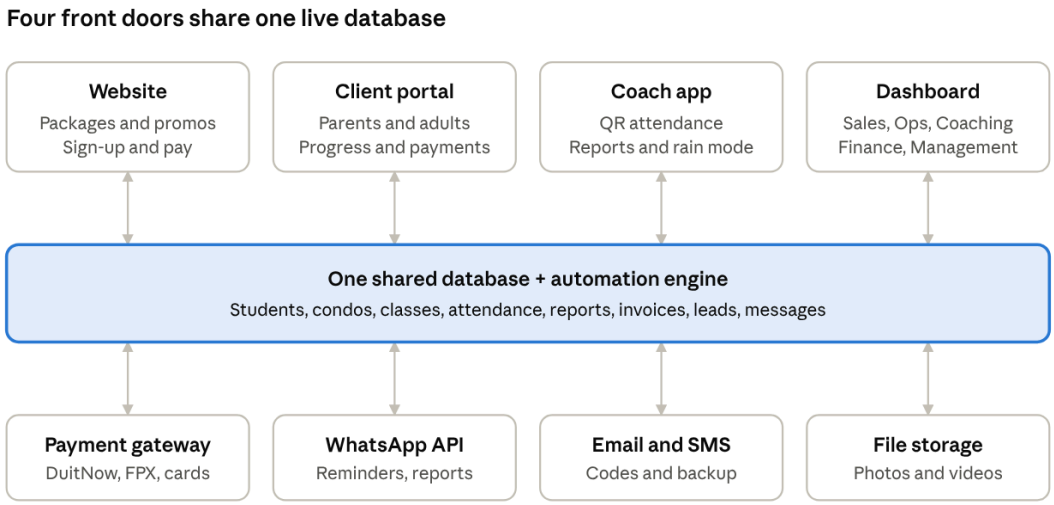

Oct 22, 2026 · @Ali Hamdin

Overview

OSA should build one platform with four front doors and one shared database, so a sale, a QR scan, a rain cancellation or a payment is entered once and every department sees it instantly. No copying between CRM, operations and finance sheets.

- **Website (public):** sells. Packages, promotions, condo pages, free trial or assessment booking, online sign-up and payment.
- **Client portal (parents and adult students):** mobile-first, installable on the phone. Schedule, progress, coach reports, payments, absences and make-ups.
- **Coach app:** mobile-first, works offline at the pool. Today's classes, QR attendance, rain reschedule, daily reports.
- **Management dashboard:** web. One area per department: Management, Sales & CRM, Operations, Coaching, Finance, Settings.
- **Automation engine (behind all four):** WhatsApp, email and push messages for reminders, renewals, rain notices and reports.

The guiding rule for developers: **the condo is the centre of everything.** Every client, class, coach route, price and report can be filtered by condo.

OSA system map · 4 front doors, 1 database, 4 integrations

Each front door reads and writes the same records; outside services connect only through the shared core.

Competitor research

No platform we found covers OSA's model of coaches travelling to outdoor condo pools, paid in 30-day advance packages, in Malaysia. The best ideas are spread across the references below, so OSA should combine them in one custom system.

Reference	Type	What they do best	What OSA takes
iClassPro (USA)	Swim-school software, from US$139/month per location (Guideflow)	Staff portal for attendance and skill checks; customer portal and branded app; make-up tokens created when a class is cancelled, with automatic expiry (help)	Make-up token logic; staff vs office vs customer portal split
Jackrabbit Swim (USA)	Swim-school software	Skill tracking per swimmer; weather closures that mark a whole class absent and eligible for make-up. Users ask for built-in CRM and a real app (Capterra)	One-tap whole-class weather cancel; CRM built in from day one
Goldfish Swim School (USA franchise)	Swim school with own app	Parents mark future absences, book make-ups with tokens, see attendance; push alerts for closures; family account with several swimmers	Parent self-service absences and make-ups; family account
Big Blue Swim School (USA)	Swim school with own software	A demo video for every skill, written coach feedback, and a progress percentage per skill instead of pass/fail	Skill % progress and skill videos in the student profile
Aqua-Tots (USA, 130+ sites)	Swim school app	Digital skill card, badges, cancel and make-up in the app	Digital "Swim Passport" with badges
British Swim School (USA)	Swim school app	Make-up requests and promotions inside the app	Promotions shown inside the client portal
WestSwim (Australia)	Swim school	Clear token rules: notify 1 hour before, token valid 90 days, bookable 3 weeks ahead	Written, automatic make-up rules
Swim England Learn to Swim (UK)	National syllabus	Stages 1–7, each with clear outcomes, badges and certificates	Structure for OSA levels and skill checklists
SwimHub, SmileTutor, DSwim (Singapore)	Condo lesson providers	Coaches travel to the condo; simple monthly packages	Condo-first marketing and package pages

Reference	Type	What they do best	What OSA takes
D Swim Academy, Sailfish (Malaysia)	Local swim schools	Strong brand and coaching; Sailfish runs 7 Klang Valley sites (BFM)	Little visible client technology: OSA can lead here

Gaps no competitor fills, where OSA wins:

- The condo as the main unit (location, pricing, coach route, marketing page).
- A rain workflow built for outdoor pools in a tropical climate, not an occasional closure.
- 30-day advance packages collected with Malaysian methods (DuitNow QR, FPX, e-wallets) and WhatsApp reminders.
- Sales CRM, operations, coaching and finance in one database instead of separate tools.

What makes OSA unique

OSA's platform should feel like a premium app for parents and a time-saver for staff. These eight features are the signature of the product; developers should treat them as must-haves, not extras.

1. **Condo-first everything.** Each condo has its own page on the website ("Swimming lessons at <condo name>"), its own schedule, coaches, pool rules and price list. Parents in the same condo see group-class openings and condo group offers.
2. **Rain Mode.** One tap by the coach puts a class on weather hold, messages every parent, and if cancelled issues make-up credits and suggests three new slots automatically (details in the rain section).
3. **Swim Passport.** Every student has a live progress card: level, skill-by-skill percentage, badges, coach video clips and certificates the parent can share.
4. **60-second coach report.** Tap ratings, pick skills, add a voice note or photo. Group classes fill one form with a row per student.
5. **Smart 30-day Swim Pass.** Sessions left and days left are always visible. The renewal invoice shows what the child achieved this month, so the parent sees the value before paying.
6. **WhatsApp-first communication.** Reminders, reports and pay links go to WhatsApp, with email and app notifications as backup.
7. **Family account.** One login for several children, with one combined invoice and sibling discount rules.
8. **One live database.** Sales, operations, coaching and finance read the same record, so nothing is re-typed and every number on the dashboard is live.

Users, roles and access

Access is controlled by **role + scope**: the role decides what a person can do, the scope decides which condos, classes or students they see. The Owner can create or change roles from a permission screen with simple on/off switches, without a developer.

Role	Sees	Can do
Owner / Management	Everything, all departments	Everything; manage roles; approve refunds and price changes
Department head (Sales, Operations, Coaching, Finance)	Their department, all condos	Manage their team; approve within their area
Sales / CRM staff	Leads, trials, clients, packages, promotions	Add and move leads, book trials, sell packages, send offers
Operations admin	Schedule, coaches, condos, rain board, make-ups	Create and move classes, assign coaches, approve reschedules
Finance staff	Invoices, payments, outstanding, payroll	Issue invoices, record payments, send reminders, refunds (with approval)
Head coach	All coaches and student progress	Approve level promotions, review report quality
Coach	Only their own classes and students	Attendance, reports, progress, reschedule requests
Parent / guardian	Only their own children	View, pay, mark absence, book make-ups, message OSA
Adult student	Only their own profile	Same as parent, for themselves

Access rules for developers:

- Staff log in with email or phone plus a one-time code; two-step login is required for Owner and Finance.
- Clients log in with phone number and a one-time code sent by WhatsApp or SMS. No password to forget.
- Invite by link: a manager enters a name, phone and role, and the person receives an invite.
- Every change to money, attendance or progress is saved in an audit log (who, what, when, before and after).
- Coaches see a payment **status** (Paid / Due soon / Overdue) on the student card. Whether they also see amounts is an OSA decision (see the last section).

Public website

The website has one job: turn a visitor into a booked trial or a paid package in under three minutes. Every page ends with two buttons: **Book a free assessment** and **WhatsApp us**.

Pages (sitemap):

1. Home: promise, video of a lesson, packages preview, "find your condo" search, reviews, trust badges (certified coaches, safety).
2. Packages: all packages as cards, with a filter for age, level and private or group.
3. Package detail: what is included, sessions, duration, price, which levels it suits, FAQ, Join button.
4. Promotions: live offers, countdown to expiry, promo code shown.
5. Condos: map and list of condos OSA serves; one page per condo with schedule openings, coaches and condo group offer.
6. Levels & curriculum: OSA levels from water confidence to stroke technique, skills per level, what certificate is earned.
7. Coaches: profiles, certifications, languages, photo.
8. Reviews & results: parent testimonials, before/after videos (with consent).
9. About OSA and safety: mission, water-safety message, coach training.
10. FAQ and policies: rain, make-up, refund, payment, safety rules.
11. Blog / water-safety tips (for search ranking).
12. Join / Checkout and Login to portal.

Package card fields (managed in the dashboard, not hard-coded): name, short pitch, age range, level range, type (private 1:1, semi-private 1:2, small group, adult), sessions per package, validity (default 30 days), session length, price, price per session, badge (Most popular / New / Promo), image, active on/off.

Promotions engine: promo codes and automatic offers, with rules for start and end date, discount (amount or %), which packages, which condos, first-time only, sibling, referral, usage limit. A promotion can appear as a website banner, a package badge and a client-portal card at the same time.

Sign-up flow:

1. Choose package (or Book free assessment).
2. Choose condo (or enter address if new condo; this creates a lead for Sales to check).
3. Child or adult details: name, date of birth, swimming experience, medical notes.
4. Choose a slot from real coach availability at that condo.
5. Pay online (DuitNow QR, FPX, card, e-wallet) or pay later for a trial.
6. Account is created automatically; WhatsApp welcome with portal link and QR card.

Website must-haves: English and Bahasa Malaysia (Chinese and Arabic as options); fast on mobile; WhatsApp floating button; Google reviews widget; tracking for Meta and Google ads; every form creates a lead in the CRM with its source (page, ad, referral code).

Client portal

The client portal is a phone-first web app the parent can add to their home screen; login is phone number plus one-time code. The home screen answers the four questions parents ask most: when is the next class, how many sessions are left, how is my child doing, and do I owe anything.

Screen	What the parent sees and does
Home	A card per child: next class (date, time, coach, condo), sessions left, days left in the package, payment status, latest coach note

Screen	What the parent sees and does
Schedule	Upcoming classes; mark absence; request reschedule; book make-up with a token
Swim Passport	Level, skill checklist with % per skill, badges, coach video clips, certificates to download and share
Reports	Feed of daily coach reports (only the parent-visible parts) with photos
Attendance	History: present, absent, rain-cancelled, make-up used
Payments	Current invoice with Pay now; history; receipts; auto-renew on/off; saved payment method
Packages & offers	Renew, upgrade, add a sibling, live promotions, referral code and rewards
Profile	Children's details, medical notes, emergency contacts, condo and unit, consents (photo/video, terms)
Messages	Chat with OSA office; notification settings (WhatsApp, email, app)
QR card	The child's QR code for attendance, saved to phone wallet or printed

Adult students see the same screens for themselves. A parent can add a second guardian (for example the other parent or a helper) with view-only or full access.

Coach app

The coach app is built for one hand, wet fingers and weak signal at the pool: big buttons, very few screens, and it keeps working offline, sending data when the signal returns.

Screens:

1. **Today:** classes in time order grouped by condo, with travel order, pool notes (access card, lift, parking) and a Start class button.
2. **Class:** student list with photo, age, level, package (sessions left, days left), payment status, medical alerts in red, and today's focus from the last report.
3. **Attendance:** scan each student's QR code. The scan records time and the phone's location, and is checked against the class's condo. Manual tick is allowed with a reason (forgot card), and Operations sees manual ticks.
4. **Rain / reschedule:** Weather hold, Cancel (rain or thunder), Late start, or Propose new time (see the rain section). Changes go straight to the Operations rain board and the parents.
5. **Daily report:** per student, or a group form with one row per student.
6. **Student profile:** everything in the student profile section except internal finance details; progress history; previous reports.
7. **My schedule & availability:** weekly timetable, block unavailable times, request leave, swap a class with another coach (Operations approves).

8. **My stats:** sessions taught, report completion %, attendance rate of my students, renewals of my students, and pay summary if OSA turns it on.

Daily report fields (per student):

Field	Input	Parent sees it?
Attendance	From QR scan; present / late / absent / rain-cancelled	Yes
Level and skills worked on	Tap from the level's skill list	Yes
Skill progress	Slider per skill: 0–100% or Not started / Learning / With help / Mastered	Yes
Attitude	1–5 faces	Yes
Effort and focus	1–5	Yes
Water confidence	1–5	Yes
Improvements today	Short text or voice note	Yes
Problems / concerns	Pick list (fear, behaviour, health, missing gear, late) + text	Choice per item
Note to parent	Text	Yes
Internal note for OSA	Text	No
Photo / video	Up to 3 files (only if photo consent is on)	Yes
Next lesson focus	Pick skills	Yes
Recommend level-up	Yes / No	No, until approved

A report is due by the end of the day; the dashboard flags missing reports. Optional later: the voice note is turned into a written summary automatically, and the coach confirms before it is sent.

Management dashboard

The dashboard opens on the department of the person logged in; the Owner sees a Management view with every department as a tab. Every number is clickable down to the list of students or invoices behind it, and every list can be filtered by condo, coach, package and date and exported to Excel.

Department	Main screens	Key numbers on its home
Management (Owner)	Company overview; condo performance; coach performance; alerts	Active students, new students, revenue this month, cash collected, outstanding, renewals due next 7 days, churn,

Department	Main screens	Key numbers on its home
		attendance %, coach utilisation, lead-to-client conversion
Sales & CRM	Lead pipeline board (New → Contacted → Assessment booked → Assessment done → Offer sent → Won / Lost); lead profile with full history; follow-up tasks; WhatsApp inbox; promotions and promo codes; referrals; renewal pipeline	New leads, leads by source, conversion %, trials this week, follow-ups overdue, renewals at risk
Operations	Master calendar (by coach, condo, day); class capacity; rain board; make-up queue; coach assignment and substitutes; condo directory (address, pool hours, rules, contact, access); incidents log	Classes today, unassigned classes, rain-cancelled today, make-ups pending, coach clashes
Coaching	Coach list; report completion; student progress by level; level-up approvals; certificates; coach certifications and expiry dates; quality checks	Reports missing, students stuck at a level for 3+ months, level-ups waiting
Finance	Invoices; payments; outstanding with ageing; reminders; credits and refunds; coach pay and commission; expenses; exports to accounting	Collected today/month, outstanding by age, renewals due, failed payments, payroll due
Settings	Packages and prices; levels and skills; condos; promotions; roles and permissions; message templates; policies; company details	—

CRM client record (the 360° view): contact details, children, condo, lead source, every message and call, trials, packages bought, payments, attendance, coach reports, complaints and notes, tags (VIP, sibling, at risk), and the next action with an owner and due date.

Student profile and progress

The student profile is the single record that sales, coaches, operations and finance all read; each role sees only the groups it is allowed to.

Group	Fields	Who sees it
Identity	Full name, nickname, photo, date of birth (age calculated), gender, language spoken, student ID, QR code	All staff, parent

Group	Fields	Who sees it
Guardians & contacts	Parent/guardian names, phone (WhatsApp), email, relationship, second guardian, emergency contact, who picks up the child	Staff, parent
Location	Condo name, block/unit, pool location in the condo, access notes	Staff, parent
Health & safety	Medical conditions, allergies, asthma/epilepsy flags, medication, fear of water level, special needs, doctor note upload	Coach, operations, parent
Swimming	Current level, start level, start date, skills %, badges, certificates, level history, goals (water safety, strokes, competition)	All staff, parent
Package	Package type, start date, end date (start + 30 days), sessions total / used / left, make-up tokens, auto-renew on/off, price and discount	Staff (coach: sessions and dates only), parent
Schedule	Fixed weekly slot(s), assigned coach, class (private / group), upcoming classes	Staff, parent
Attendance	Every session: present, late, absent (notified or not), rain-cancelled, make-up	Staff, parent
Payments	Invoices, paid date, method, outstanding, payment status	Finance, management; coach sees status only; parent
Reports	All daily coach reports	Staff; parent sees parent-visible parts
Sales & CRM	Lead source, sales owner, referral code, tags, satisfaction score, complaints	Sales, management
Consents	Terms accepted, photo/video consent, data consent (PDPA), date accepted	Staff, parent
Internal notes	Free notes with author and date	Staff only

Progress model:

- OSA defines its levels in Settings (for example Water Confidence, Beginner 1–2, Intermediate 1–2, Advanced, Stroke Development, Adult), each with a list of skills and the outcome needed, following the stage-and-outcome idea of the Swim England framework.
- Each skill has a progress value set by coaches in reports. When all core skills of a level are Mastered, the coach can recommend a level-up; the head coach approves.

- On approval the system creates a certificate with the child's name and photo, adds a badge to the Swim Passport, and sends it to the parent.
- Progress charts show skills over time, attendance %, and average attitude and confidence ratings.

Package and payment cycle

Every package runs for 30 days from its start date and is paid in advance; the system invoices, reminds and reconciles automatically so Finance only handles exceptions.

The 30-day cycle:

1. **Day 0:** package starts after payment is confirmed. Sessions and the 30-day end date are set.
2. **Day 23 (7 days before end):** renewal invoice is created and sent by WhatsApp with a Pay now link and a short progress summary.
3. **Day 27 (3 days before):** first reminder if unpaid.
4. **Day 30 (due date):** second reminder; Sales sees the client in "Renewals at risk".
5. **Day 31 and Day 33:** overdue reminders; coach card shows Overdue.
6. **Day 37:** final notice; classes go on hold unless a manager allows a grace period. Every day number here is a setting OSA can change.
7. **Payment received:** next package starts the day after the current one ends, so there are no gaps.

Payment methods: DuitNow QR, FPX online banking, cards and e-wallets (Touch 'n Go, GrabPay, ShopeePay, Boost) through one payment gateway, which are the methods Malaysian customers mostly use (HitPay). Paid online = marked Paid automatically by the gateway's confirmation. Bank transfer = parent uploads proof, Finance confirms with one click.

Invoice statuses: Draft · Sent · Partly paid · Paid · Overdue · Cancelled · Credited/Refunded.

Finance screens:

- Outstanding list with ageing: 1–7 days, 8–30, 31–60, 60+ days; each row has a Send reminder button and a call log.
- Bulk reminder: select clients, pick a template, send by WhatsApp and email.
- Collections forecast: renewals due in the next 7 and 30 days.
- Revenue by condo, package, coach and month; cash collected vs revenue earned.
- Credits: unused sessions from OSA-side cancellations become make-up tokens, not refunds, unless a manager approves a refund.
- Coach pay: sessions taught x rate, plus commission rules (for example per renewal), approved monthly and exported.
- Export to Excel and to the accounting software, with the same categories as OSA's bank-statement workbook (Salary & Commission, supplier invoices, etc.) so the bank reconciliation stays easy.

e-Invoice: from 1 September 2026, businesses with annual sales under RM3 million are not required to issue LHDN e-invoices (Bernama). OSA's bank data shows about RM1.05 million revenue in the last 12 months, so it is currently exempt, but the invoice table should keep the fields MyInvois needs (TIN, ID, line items, tax) so it can be switched on later.

Rain and weather reschedule

OSA's pools are outdoor, so rain is a daily operation, not an exception. The common international rule is to leave the pool when thunder or lightning occurs and wait 30 minutes after the last one (USA Swimming club notice); light rain alone usually does not stop a lesson if the coach can see the bottom of the pool (Columbia Association).

Flow:

1. Coach taps **Weather hold** on the class. Parents get an instant WhatsApp: "Class paused for thunder, we will update you in 30 minutes."
2. Each new thunder resets the 30-minute timer in the app.
3. If the hold passes the halfway point of the class, or the coach taps **Cancel**, the class is cancelled.
4. If at least half the class was taught, it counts as a session (policy setting); otherwise every student gets a make-up token and the session is not deducted.
5. The system suggests three make-up slots using the same coach and condo, the coach's free time and the pool's hours. The parent picks one in the portal, or Operations assigns it.
6. A coach can also propose a new time directly; it needs Operations approval if it clashes with another class.
7. Make-up tokens expire a set number of days after the package ends (OSA decides); the package end date can also be extended automatically instead.

Operations rain board: a live list of today's held and cancelled classes, make-ups waiting for a slot, coaches free now, and parents who have not answered. Optional later: a weather feed that warns Operations the evening before when heavy rain or thunder is forecast for a condo's area.

Automations and notifications

All messages use templates editable in Settings, in the client's language, sent on WhatsApp first with email and app notification as backup.

Trigger	Message	To
New lead from website or ads	Welcome + book-assessment link; task for Sales within 15 minutes	Lead, Sales
Assessment booked / day before	Confirmation, coach name, what to bring	Parent, coach
Package paid	Welcome, schedule, QR card, portal link	Parent
Day before each class	Reminder with time, coach, condo	Parent
Weather hold / cancel	Hold notice; then cancel notice with make-up options	Parents of that class, Operations
Daily report submitted	"New report from Coach X" with link	Parent

Trigger	Message	To
Report missing by end of day	Reminder; next morning alert to head coach	Coach, Coaching head
Level-up approved	Certificate and badge	Parent
3 sessions left / 7 days left	Renewal reminder with progress summary and Pay now	Parent, Sales
Invoice overdue	Reminder ladder (see payment cycle)	Parent, Finance
Absent twice without notice	Check-in message; task for Sales	Parent, Sales
Student stuck at a level 3+ months	Review task	Head coach
Coach certification expiring in 30 days	Renewal reminder	Coach, Coaching head
Monthly	Progress summary per child	Parent

Data model

These are the main tables and how they connect; developers can add technical fields, but the names and links below should stay so every department shares the same meaning.

Table	Key fields	Links to
Family (account)	Name, phones, email, language, address, referral code, tags	Guardians, Students, Invoices
Guardian	Name, phone, email, relationship, access level	Family
Student	Name, DOB, photo, medical, level, QR token, status (lead / trial / active / paused / left)	Family, Condo, Enrolments, Reports
Lead	Contact, child info, source, stage, owner, next action, lost reason	Family (when won), Condo, Promotions
Condo	Name, address, map pin, pool hours, rules, access notes, contact, area	Classes, Students, Coaches
Coach (staff)	Name, phone, certifications + expiry, rates, availability, condos covered	Classes, Reports, Payroll
Package (product)	Name, type, sessions, validity days, length, price, levels, ages, active	Enrolments, Promotions

Table	Key fields	Links to
Enrolment (a bought package)	Student, package, start, end, sessions used/left, price paid, discount, auto-renew	Student, Package, Invoice, Sessions
Class (slot)	Condo, coach, day/time, type, capacity, level	Sessions, Enrolments
Session (one lesson)	Date, time, class, status (scheduled / done / rain hold / cancelled / make-up)	Attendance, Reports
Attendance	Session, student, status, scan time, location, method (QR / manual)	Session, Student
Make-up token	Student, reason, issued, expiry, used on session	Student, Session
Report	Session, student, coach, ratings, skills progress, notes (parent / internal), media	Session, Student, Coach
Level & Skill	Level name, order, skills, outcome text, video	Student progress
Invoice & Payment	Number, family, lines, total, due date, status, method, gateway reference	Family, Enrolment
Promotion	Code, rule, dates, limits, packages, condos	Enrolments, Leads
Message log	Channel, template, to, sent, delivered, read	Family, Lead
Audit log	User, action, record, before, after, time	All

Tech stack and integrations

We recommend a custom build rather than buying iClassPro or Jackrabbit, because neither is built around condos, Malaysian payment methods, WhatsApp-first messaging or a full sales CRM. The stack below is a recommendation; the developers can propose equivalents.

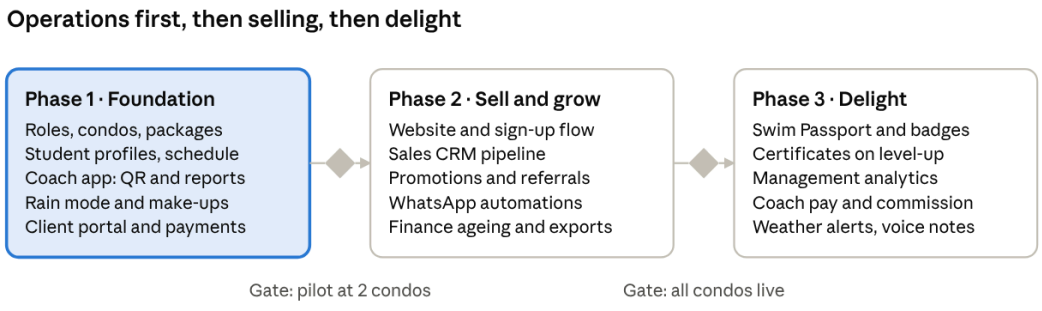

Part	Recommendation	Why
Website	Next.js (React), server-rendered	Fast, good for Google ranking, shares code with the dashboard
Client portal & coach app	Progressive web app (installable, offline), one codebase; native iOS/Android later if needed	One build for all phones; offline QR scanning at the pool
Dashboard	Same React codebase, role-based screens	One login system, one design
Backend & database	PostgreSQL with an API layer (for example NestJS, or Supabase for speed)	Reliable for money and attendance;

Part	Recommendation	Why
		row-level security per role
Login	Phone + one-time code for clients; email/phone + code for staff, two-step for Owner/Finance	No passwords for parents
Payments	A Malaysian gateway with DuitNow QR, FPX, cards, e-wallets, recurring billing and payment confirmations to our system (for example HitPay, Billplz, iPay88 or Stripe)	Auto-mark invoices paid
WhatsApp	WhatsApp Business Platform (official API) with approved templates	Reminders, reports, rain notices
Email / SMS	A transactional email service; SMS fallback for codes	Backup channels
Files	Cloud storage for photos and videos, private links	Reports and Swim Passport media
Hosting	Cloud region in Singapore or Malaysia, daily backups	Speed and data location
Analytics	Google Analytics + Meta pixel on the website; dashboard KPIs from the database	Ad tracking and lead source

Security and privacy: follow Malaysia's Personal Data Protection Act (children's data, medical notes and photos need consent and restricted access); encrypt data; QR codes carry a random token, never the child's name; media visible only to that family and staff.

Build phases and acceptance checklist

Build the operations core first so coaches and finance stop using spreadsheets, pilot it at two condos, then add the selling and delight layers. The website can be designed in parallel during Phase 1 and launched when sign-up and payment are ready.

Build roadmap · 3 phases, 2 gates

The developers should give their own time estimate per phase after reading this document.

OSA accepts a phase when:

- ☐ A coach can scan a full class's QR codes in under 1 minute, also with no signal.
- ☐ A rain cancellation reaches every parent of that class on WhatsApp within 1 minute and creates make-up tokens.
- ☐ A daily report for a group of 4 takes the coach under 3 minutes.
- ☐ A parent can pay a renewal from the WhatsApp link in under 1 minute, and the invoice turns Paid without Finance touching it.
- ☐ The outstanding list matches the payment gateway and bank records to the ringgit.
- ☐ A coach cannot open a student who is not in their classes.
- ☐ Every dashboard number opens the list behind it and exports to Excel.
- ☐ A visitor can go from the home page to a booked assessment in under 3 minutes on a phone.

Decisions OSA needs to confirm

These answers change what the developers build, so OSA should confirm them before work starts.

- ☐ Final list of packages, prices, session counts and group sizes.
- ☐ OSA level names and the skills in each level.
- ☐ Do coaches see payment amounts, or only Paid / Due / Overdue? (Recommended: status only.)
- ☐ Rain rule: how much of a class counts as delivered (recommended: half), and how long make-up tokens stay valid.
- ☐ Make-up rule for client absences: allowed with notice (how many hours before?) or not.
- ☐ Overdue rule: how many days before classes go on hold.
- ☐ Languages for website and messages (English, Bahasa Malaysia, Chinese, Arabic?).
- ☐ Are OSA and PW separate brands on the website, or one platform with two business units?
- ☐ Which payment gateway (compare fees for DuitNow QR and FPX).
- ☐ Progressive web app first, or native iOS/Android apps from day one.
- ☐ Coach pay and commission rules to show in the coach app.
- ☐ Moving current client, package and payment data from existing sheets into the new system.
